Art Unit: 1724

The disclosure is objected to because of the following informalities: Figs. 1 has been identified as a prior art apparatus (see page 2, lines 8-9 of the specification), and therefore must be labeled as such in accordance with M.P.E.P. § 608.02(g).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicant regards as the invention. The term "the liquid inlet" (claim 1, line 9) lacks antecedent basis in the claim, and is therefore indefinite. Claims 2-6 depend from claim 1, and are therefore also indefinite.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art in view of Tempest (U.S. Patent No. 6,824,695). Applicant has admitted that a system for processing waste ozone is known (see Fig. 1; and page 2, line 8 through page 3, line 10 of the specification). This known system comprises: a process device **100**, an ozone generator **102** coupled to the process device, and a local scrubber **106**. Accordingly, claims 1-13 differ from this admittedly known system by the recitation of a drained water tank, a gas/liquid mixing device, a decomposition device, and an absorption device. Tempest discloses (see Figs. 1 and 3) a liquid purification system comprising a drained water tank ("Water Collecting Tank"), a gas/liquid mixing device ("Venturi Injection"), a decomposition device ("Ozone Destructing

Art Unit: 1724

Unit”), and an absorption device (“Activated Carbon Filter” or “Ion Exchange Module”). This reference also teaches that the ozone destruction unit can include a UV lamp (see col. 6, lines 46-50). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the admittedly known waste ozone processing system with the purification system of Tempest, in order to simultaneously treat the waste ozone and drained water of this admittedly known system.
